Choosing the right eSIM

WRKSNET • eSIM BUYER'S GUIDE

Read this before you buy. It takes two minutes and saves buying the wrong plan.

Every eSIM we sell does one of two jobs: it gives you data, or data plus a phone number. Almost every wrong purchase comes from missing one detail — where the plan actually works.

> **The mistake people make most often**
>
> A **Country** plan only works while your phone is physically inside that country. Buying the USA plan while you are in Nigeria will not work, and the plan cannot be cancelled or refunded once issued. If you need a USA number while living outside the USA, the plan you want is **Global number (Data + SMS)**.

Start here: three questions

1. Do you need a phone number, or just internet?

If you only want to browse, use maps and message on WhatsApp, you need **data only** and no number. If you need to receive SMS or make calls, you need a plan **with a number**.

2. Which country will your phone be in?

Not where you are buying from — where the phone will physically be when you use it. This is the detail that decides everything.

3. One country, one region, or everywhere?

One country means a Country eSIM. Several countries on one trip means Regional. Travelling often, or wanting a number that follows you anywhere, means Global.

The menu at a glance

Open the bot and go to **Our Services** → **Phone Services** → **eSIM**.

Plan	Phone number?	Where it works	Best for
Country eSIM — Data Only	No number	Only in the one country you picked	A trip to a single country
Country eSIM — Data + Number	Yes, a USA +1 number	Only while you are in the USA	Someone travelling to the USA
Regional eSIM	No number	Across the countries in that region	A multi-country trip
Global — Data Only	No number	Most countries worldwide	Frequent travel, data only
Global — Number (Data + SMS)	Yes, a USA +1 number	Works in 168+ countries, including Nigeria and Ghana	Keeping a USA number wherever you are

Country eSIM

Pick one country. Two options sit inside it.

Data Only

Internet access in that country, with no phone number attached. Available for around 36 destinations. Use it for maps, browsing, social apps and messaging. Nobody can call or text you on it, because there is no number to call.

Data + Number

Data plus a real USA +1 number that can send and receive SMS and make calls. Currently USA numbers only. The number appears on your phone once the eSIM is active.

> **Three things to know about the USA number**
>
> Incoming messages are free and never count against your SMS allowance — only the messages you send are counted. Calls work to covered countries only. Some services do not deliver verification codes to numbers of this type, so please do not buy it solely to receive a verification code.

Regional eSIM

One eSIM that works across a group of countries — useful when a single trip crosses borders. All regional plans are **data only**, with no phone number. Europe is offered in two sizes covering different numbers of areas, so check the coverage list before choosing, because the smaller bundle leaves out some countries.

Global eSIM

The widest coverage we sell, in two forms.

- **Global Data Only** — internet in most countries, no phone number.
- **Global number (Data + SMS)** — data plus a USA +1 number that keeps working across 168+ countries, including Nigeria, Ghana and much of Africa. Check the full list under **Covered Countries** in the Global eSIM menu.

> **Validity starts when you install it**
>
> A Global plan's clock begins the moment the eSIM is installed on your phone, not when you buy it. If you are buying ahead of a trip, install it when you are ready to use it.

Top Up eSIM

Already have an eSIM from us that has run low or is close to expiring? Top it up instead of buying a new one. You keep the same eSIM, and if your plan includes a number, you keep the number too. Renewing before the plan expires is the only way to keep that number — once a plan lapses the number is released and cannot be recovered.

Before you buy

- An eSIM stays tied to the first phone you install it on. It cannot be moved to another device.
- Your phone must support eSIM and must not be carrier-locked.
- eSIMs are not cancellable or refundable once issued, which is why the country matters so much.

- Data Only plans have no phone number, so no calls or SMS of any kind.
- If you are unsure which plan fits, message support before buying rather than after.

Installing your eSIM

After your order completes, the bot sends you a QR code plus the details needed to install it by hand. Use whichever is easier.

- **Scan the QR code** — open your phone's camera or eSIM setup screen and scan the code from another screen.
- **Enter it manually** — use the SM-DP+ Address and Activation Code we send you.

On iPhone: Settings → Cellular → Add eSIM. On most Android phones: Settings → Network & internet → SIMs → Download a SIM instead. If your plan includes a number, you will find it under Settings → Cellular → your eSIM → My Number.

Checking your data

Tap **Check eSIM Usage** in the eSIM menu at any time to see how much data you have used and how much is left on each of your eSIMs. We also message you automatically when a plan is running low or close to expiring, so you have time to top up.

Still not sure?

Tell support which country your phone will be in and whether you need a phone number, and we will point you to the right plan. It is far easier to ask first than to replace a plan that cannot be refunded.

> **The short version**
> Need internet in one country — Country eSIM, Data Only. Several countries on one trip — Regional eSIM. A USA number you can use from anywhere — Global number (Data + SMS). Travelling constantly and only need data — Global Data Only.
