
An automated digital service gateway delivering instant access to services with no lengthy processes. This guide walks you through every service on WorksNet - from getting started and funding your balance, to using Phone Numbers, Proxies, Gift Cards, License Keys, Print & Mail, Bill Pay, and getting support.

WHAT'S INSIDE

1. Getting Started
2. Funding Your Balance (Crypto & Bank Payments)
3. Phone Numbers
4. Proxies - Ordering & Full Setup Guide (Firefox, Chrome, iOS, Android)
5. Gift Cards
6. License Keys
7. Print & Mail
8. Bill Pay (Airtime, Data, Electricity, Cable TV)
9. Order History & Account
10. Loyalty Rewards
11. Getting Support
12. Frequently Asked Questions

1. Getting Started

WorksNet is a privacy-focused digital services platform, accessible entirely through Telegram. No email, no phone number, and no identity verification is ever required to use any service.

To begin:

1. Open Telegram and search for @worksnet_bot, or tap the bot link you were given.
2. Send /start to see the main menu.
3. Tap — Our Services to browse everything available: Phone Numbers, Proxies, Cards & Keys, Print & Mail, and Bill Pay.
4. Tap — My Account to check your balance or fund your account.
5. Tap — Server Status any time to confirm all services are running normally.

Tip: When using any US-based verification number, make sure your device or connection reflects a USA location at the time you request the code. Some platforms reject verification codes if the request comes from a different location than the number's country.

2. Funding Your Balance

Your WorksNet balance is held in USD and can be topped up using crypto or local bank transfer, depending on what's most convenient for you.

Crypto (USDT - TRC20)

1. Tap My Account → Fund Account with Crypto.
2. Choose a deposit amount (e.g. +\$20, +\$50).
3. A unique deposit address is generated for you.
4. Send the exact USDT amount to that address.
5. Your balance updates automatically within a few minutes of payment confirming on the blockchain.

Bank Transfer (Naira or Cedis)

WorksNet supports direct bank transfer funding in Nigerian Naira (NGN) and Ghanaian Cedis (GHS).

1. Tap My Account → Fund Account with Bank.
2. Select your preferred currency: NGN or GHS.
3. Enter the amount you'd like to deposit (minimum ₦5,000 or ₵50, depending on currency).
4. Tap the payment link generated and complete payment via your bank.

5. Your balance updates automatically, converted to USD at the live exchange rate, usually within minutes.

Note: Deposits fund your WorksNet balance for use on services within the bot. Deposits cannot be reversed or refunded back to your bank account, in line with our fraud protection policy. If a specific order fails, you'll always be refunded automatically to your WorksNet balance.

3. Phone Numbers

Get real, non-VOIP verification numbers for popular platforms including WhatsApp, Telegram, Signal, TikTok, Craigslist, and Nextdoor. Numbers are currently available for USA, UK, Germany, and France (WhatsApp specifically).

1. Tap Our Services → Phone Numbers.
2. Choose the platform and country you need a number for.
3. Your balance is checked automatically; if sufficient, a number is provisioned instantly.
4. Wait for your verification code - this typically arrives within 1-4 minutes.
5. If no code arrives within 4 minutes, you are automatically refunded - no need to contact support for this.

All numbers are real, carrier-based numbers - not VOIP. You can verify any number yourself for free at phonevalidator.com.

4. Proxies

WorksNet offers private SOCKS5 proxies across five countries: USA, Russia, Australia, and Sweden.

1. Tap Our Services → Proxies.
2. Choose your country.
3. Type the specific state/region you'd like a proxy from.
4. Your order is submitted for manual fulfillment and delivered within 1-3 minutes.

Loyalty reward: every 10th proxy you order is completely free, automatically applied - no extra steps needed.

Proxy Setup Guide - SOCKS5 on Firefox, Chrome & Mobile

This section walks you through configuring your WorksNet SOCKS5 proxy on desktop browsers (Firefox, Chrome) and mobile devices (iOS, Android). Your proxy does not require a username or password - only the host address and port shown when you receive your proxy.

Before You Start

When you receive your proxy, you'll be given an IP address (host) and a port number. That's all you need. No authentication is needed - when a setup screen asks for a username or password, simply leave those fields blank and continue.

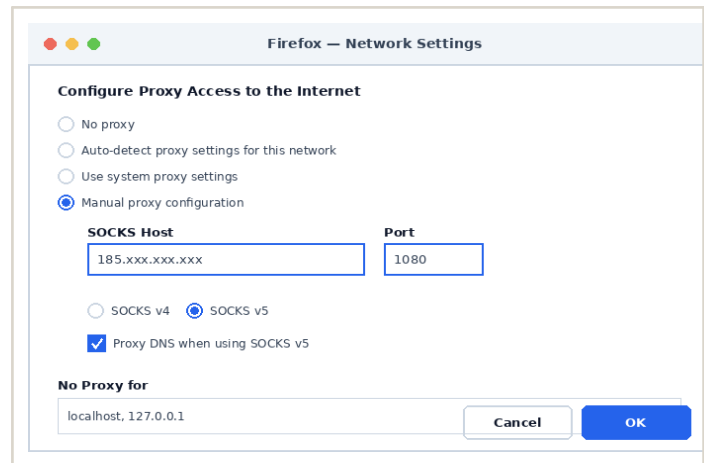

- Firefox - supports SOCKS5 natively, no extension needed
- Chrome / Brave / Edge - requires a free extension, since these browsers have no built-in SOCKS5 option
- iPhone/iPad - use the free Potatso app
- Android - use a dedicated proxy app, since Android has no built-in SOCKS5 support

Firefox Setup (Windows & Mac)

Firefox is the easiest browser to use with a SOCKS5 proxy, since it supports it directly in its settings - no extension required.

1. Open Firefox and click the menu button (three horizontal lines) in the top-right corner, then select Settings.
2. Scroll down to the Network Settings section near the bottom of the General tab, and click Settings...
3. Select Manual proxy configuration.
4. In the SOCKS Host field, enter your proxy's host/IP address. In the Port field, enter the port number.
5. Select SOCKS v5 as the proxy version.
6. Check Proxy DNS when using SOCKS v5 to prevent DNS leaks (recommended).

7. Leave the Username and Password fields blank - your WorksNet proxy does not require them.
8. Click OK to save. Your traffic will now route through your proxy. To disable it later, return to the same screen and select No proxy.

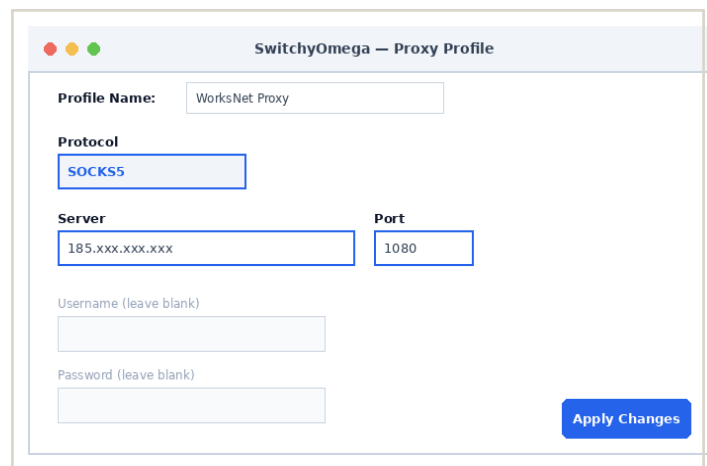

Example of Firefox's Manual Proxy Configuration screen with SOCKS5 selected.

Chrome / Brave / Edge Setup (Windows & Mac)

Chrome, Brave, and Edge don't have a built-in way to configure a SOCKS5 proxy, since they all share the same underlying browser engine. The most reliable way to use one is through a free extension.

Recommended: SwitchyOmega (ZeroOmega)

1. Open the Chrome Web Store and search for "Proxy SwitchyOmega" (also listed as ZeroOmega). Click Add to Chrome.
2. Once installed, click the SwitchyOmega icon in your toolbar and select Options.
3. Create a New Profile, name it (e.g. "WorksNet Proxy"), and choose Proxy Profile as the type.
4. Under Protocol, select SOCKS5.
5. Enter your proxy's host/IP address and port. Leave the username and password fields blank.
6. Click Apply Changes to save.
7. Click the SwitchyOmega icon and select your new profile to activate it. Select [Direct] at any time to turn the proxy off.

The image shows a browser window titled "SwitchyOmega — Proxy Profile". Inside, there's a form with the following fields: "Profile Name:" with the value "WorksNet Proxy"; "Protocol" with a dropdown menu showing "SOCKS5"; "Server" with the value "185.xxx.xxx.xxx"; "Port" with the value "1080"; "Username (leave blank)" with an empty text box; and "Password (leave blank)" with an empty text box. A blue "Apply Changes" button is located at the bottom right of the form.

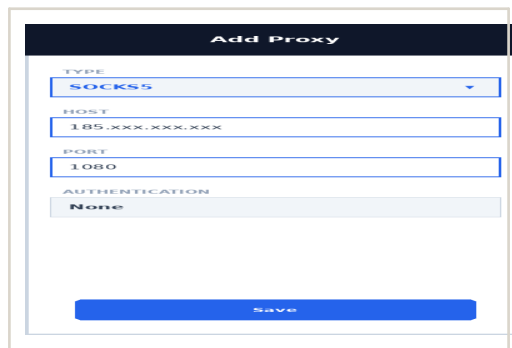

Example of a SwitchyOmega proxy profile configured for SOCKS5.

Note: These steps work identically whether you're using Chrome, Brave, or Edge - just install the extension in whichever browser you're using.

iOS Setup (Potatso)

iOS's built-in Wi-Fi proxy settings only support HTTP/HTTPS, not SOCKS5. Potatso is a free, widely-used app that adds full SOCKS5 support to iPhone and iPad.

1. Download Potatso for free from the App Store.
2. Open Potatso and tap Add a Proxy.
3. Under the Manual Input section, tap Add.
4. Set Type to SOCKS5.
5. Enter your proxy's Host (IP address) and Port.
6. For Authentication, leave it set to None - your WorksNet proxy does not require a username or password.
7. Save the profile, then tap the Play icon to activate it.
8. If prompted, tap Allow and enter your device passcode so Potatso can add a VPN configuration profile (this is how it routes traffic on iOS - it does not mean you are using a VPN service).

Example of the Potatso "Add Proxy" screen with SOCKS5 selected and Authentication set to None.

Android Setup

Android's system Wi-Fi settings do not support SOCKS5 proxies. A dedicated proxy app is required to route your traffic through a SOCKS5 connection.

Recommended apps: Postern (free, supports SOCKS5, widely used) or Drony (free, supports per-app proxy routing)

1. Install Postern (or Drony) from the Google Play Store.
2. Open the app and create a new proxy profile.
3. Set the proxy type to SOCKS5.
4. Enter your proxy's Host (IP address) and Port.
5. Leave the username and password fields blank - no authentication is required.
6. Save and activate the profile. The first time you connect, Android will ask permission to add a VPN configuration - tap OK to allow it. This is how these apps route traffic on Android; you are not connecting to a VPN service.

The image shows a mobile application screen titled "New Proxy Profile". It features a green header bar with the title in white. Below the header, there are five input fields: "Proxy Type" (with "SOCKS5" selected), "Host / IP Address" (with "185.XXX.XXX.XXX"), "Port" (with "1080"), "Username (leave blank)", and "Password (leave blank)". At the bottom of the screen is a blue button labeled "Save & Activate".

Example of a Postern-style proxy profile screen with SOCKS5 configured.

Only install proxy apps from the official Google Play Store. Avoid APK files from third-party websites, as these carry a higher risk of containing malware.

Verifying Your Connection

1. Open a browser (with the proxy active) and visit a site such as whatismyipaddress.com or ip.me.
2. Check that the IP address shown matches the proxy IP you were given - not your real IP address.
3. If the IP shown is your real IP, double-check that the proxy is switched on and that the host/port were entered correctly.

Proxy Troubleshooting

Q: The browser is asking me for a username and password.

A: Your WorksNet proxy does not require authentication. Leave these fields blank, or check that you entered the host and port correctly - a typo can sometimes trigger an authentication prompt.

Q: My internet stopped working after setting up the proxy.

A: Double-check the host and port are entered exactly as provided, with no extra spaces. Confirm you selected SOCKS5 (not HTTP/HTTPS) as the proxy type.

Q: Pages are loading slowly.

A: This can happen depending on your location relative to the proxy server, or current network conditions. Try disabling and re-enabling the proxy, or contact support if the issue persists.

Q: How do I turn the proxy off?

A: Firefox: set Network Settings back to "No proxy" or "Use system proxy settings." Chrome: select [Direct] in SwitchyOmega. Potatso/Android apps: tap the Stop or Disconnect button in the app.

5. Gift Cards

Apple/iTunes and PlayStation gift cards are available in \$10, \$25, and \$50 denominations, with instant delivery.

1. Tap Our Services → Cards & Keys → Gift Cards.
2. Choose the brand and denomination you'd like.
3. Your balance is checked automatically.
4. If in stock, your gift card code is delivered to you instantly.
5. If a specific denomination is temporarily out of stock, you'll be notified and can check back later - stock is refreshed regularly.

6. License Keys

Genuine, authorized Microsoft 365 license keys, backed by a 3-month warranty. Currently available as 12-month plans for both Personal (1 user) and Family (up to 6 users).

1. Tap Our Services → Cards & Keys → License Keys.
2. Tap Microsoft 365.
3. Choose Personal or Family.
4. Your balance is checked and your key is delivered instantly if in stock.

Activation only requires the 25-character key, redeemed on Microsoft's own website, linked to your own Microsoft account. Once redeemed, a key cannot be transferred to a different account.

7. Print & Mail

Send real letters and postcards to USA and Canada addresses, with a choice of Standard or Priority delivery.

1. Tap Our Services → Print & Mail.
2. Choose Letter or Postcard.
3. Enter the recipient's full address in the format shown.
4. For letters, enter the number of pages you're sending.
5. Upload your document as a PDF.
6. Choose your delivery speed: Standard (7-10 working days) or Priority (1-3 working days).
7. Your order is submitted for review. You'll be notified once it's approved and sent, or if there's an issue.

All submissions are reviewed by our team before being sent, to ensure they meet our safety policy. You are not charged until your order is approved.

8. Bill Pay

Pay for Airtime, Data, Electricity, and Cable TV bills directly through WorksNet, currently available for Nigerian billers. Your unused WorksNet balance is automatically converted and applied - no extra fees at all.

Airtime

1. Tap Our Services → Bill Pay → Phone Bills → Airtime.
2. Enter the recipient's phone number.
3. Enter the amount in Naira (minimum ₦50).
4. Your balance is converted automatically and the airtime is delivered instantly. The network is detected automatically from the phone number.

Data

1. Tap Our Services → Bill Pay → Phone Bills → Data.
2. Choose your network: MTN, Glo, or Airtel.
3. Choose a data plan from the list shown (1GB and above).
4. Enter the recipient's phone number.
5. Your balance is converted automatically and the data bundle is delivered instantly.

Electricity

1. Tap Our Services → Bill Pay → Utility Bills → Electricity.
2. Choose your electricity provider (DISCO) from the list.
3. Choose Prepaid or Postpaid.
4. Enter your meter number - it will be validated and the account holder's name shown for confirmation.
5. Enter the amount in Naira (minimum ₦500).
6. Your token is delivered once payment completes. If it doesn't arrive immediately, it will be retried automatically for a short period; if it's still delayed, contact /support with the reference number shown.

Cable TV

1. Tap Our Services → Bill Pay → Utility Bills → Cable TV.
2. Choose your provider: DSTV, GOTV, or StarTimes.
3. Choose a package from the list shown.
4. Enter your SmartCard/IUC number - it will be validated and the account holder's name shown for confirmation.

5. Your balance is converted automatically and your subscription is activated instantly.

9. Order History & Account

Tap Our Services → Order History to see your last 15 orders, with full details including gift card codes, proxy details, phone numbers, and addresses.

Tap My Account at any time to check your current balance and access funding options.

10. Loyalty Rewards

WorksNet automatically rewards frequent use of two services:

- Proxies: every 10th proxy order (across all countries combined) is completely free.
- Phone Numbers: every 10th phone number order (across all services combined) is completely free.

These are applied automatically - no code or extra step is needed.

11. Getting Support

If you run into any issue not covered in this guide, our support team is available directly through the bot.

1. Send /support to the bot, or tap Contact Support from the main menu.
2. Describe your issue, including your Order ID if relevant.
3. Your message is forwarded directly to our support team, and you'll receive a reply as soon as possible.

12. Frequently Asked Questions

Q: Do I need to provide an email or phone number to use WorksNet?

A: No. None of our services require an email, phone number, or identity verification.

Q: What happens if I don't receive a code for a Phone Number order?

A: You're automatically refunded after 4 minutes if no code arrives - no need to contact support for this specific issue.

Q: Can I get a refund for a deposit I made?

A: Deposits fund your WorksNet balance and cannot be refunded back to your bank account. Failed orders are refunded instantly to your WorksNet balance instead.

Q: Are WorksNet phone numbers VOIP?

A: No. All numbers are real, carrier-based numbers. You can verify this yourself for free at phonevalidator.com.

Q: Does Bill Pay work for Ghanaian billers?

A: Not currently - Bill Pay is available for Nigerian billers only at this time.

Q: How long does Print & Mail take?

A: Standard delivery takes 7-10 working days; Priority delivery takes 1-3 working days.

WorksNet – Built for scale, optimized for security.
